

Ingredients

Productivity Solution

Productivity Solutions are functional extensions for the Centric PXM™ PIM system. Depending on the technical design of a Productivity Solution, it is compatible with on-premise installations or the cloud version.

Description

Ingredients is used for managing ingredients and labeling requirements in Centric PXM™ and, if necessary, enabling the configuration of semi-finished products (e. g. in the food sector or chemical industry). This includes, for example, organising formulations, nutritional values and allergens in the food sector according to the German Federal Food Code or the assignment of hazardous goods labels in connection with chemical substances.

Suitable for

- > Centric PXM™ | SaaS
- > Centric PXM™ | On-premise

Preconditions

None

Expansion stages and bundle variants

Designation

Licence

Function

- > Collection of information on products and their ingredients
- > Automatic generation of labels and declarations.
- > Ability to import information from various source databases such as the Federal Food Code.
- > Information can be flexibly linked to products

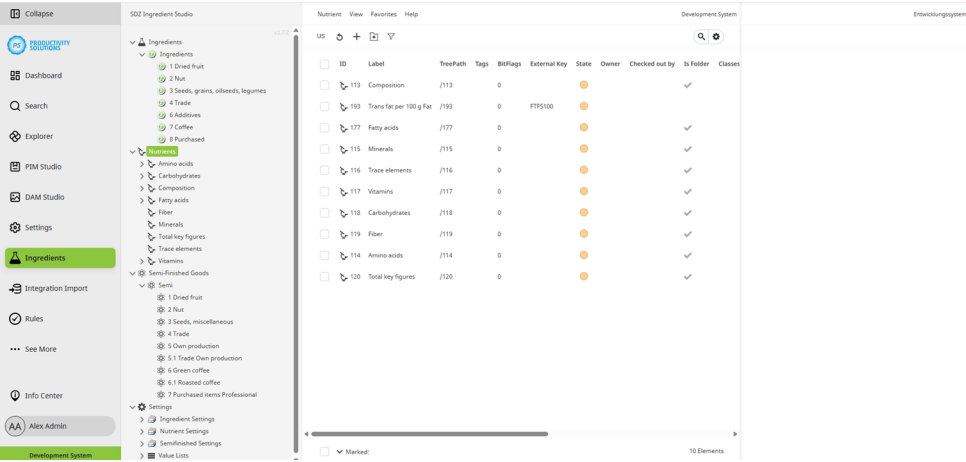

Advantages

- > Improved labelling of products
- > Improved traceability and transparency
- > Optimisation of product development
- > Support for regulatory compliance
- > Support for complex recipes
- > In the food environment: Generation of the nutritional value table and ingredients list

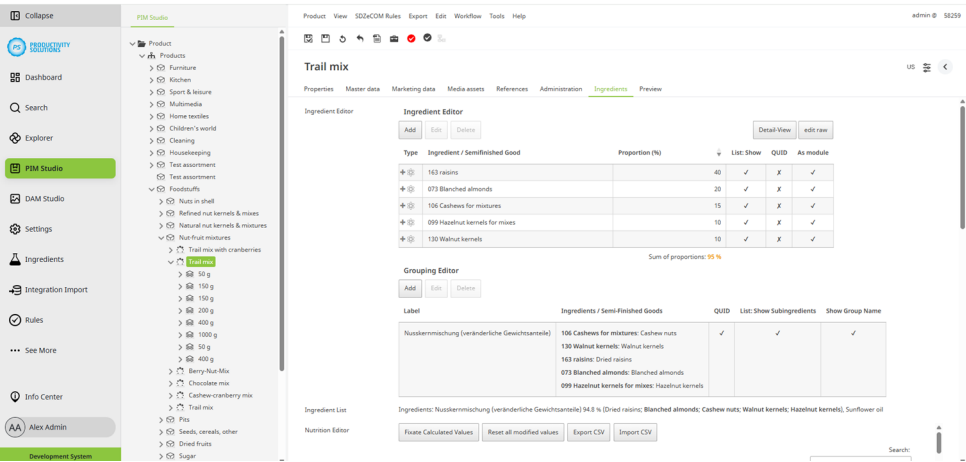

Use cases

- > Recording of ingredients and labelling requirements for food
- > Management of information on chemicals in the chemical industry
- > Recording of ingredients and labelling obligations for cosmetics
- > Management of information on raw materials in the textile industry

About us

SDZeCOM is one of the pioneers and most successful system designers and system integrators of solutions for efficient (product) data management in German-speaking countries. Our services range from the selection and introduction of master data management systems (MDM) and product information management systems (PIM) as well as database publishing systems to the ongoing support and enhancement of solutions.

We collaborate with various software partners such as Contentserv, Stibo Systems, prodexa and Werk II. These strategic partnerships provide us with a technology portfolio that covers all key areas and requirements for efficient information supply chain management (ISCM for short).

Our range of services – covering all aspects of MDM, PIM and data management – extends from consulting, development and support of a forward-looking solution, through various exclusive solutions and services, to the development of a modern ISCM and publishing strategy.
